EDUCATION

University of Science and Technology of Southern Philippines

B.S. Computer Science, Cum Laude

Best Thesis Award | Dean's List (4 semesters)

Cagayan de Oro City

Jun 2026

TECHNICAL SKILLS

Languages	TypeScript, JavaScript, PHP, Python, SQL, HTML5, CSS3
Frontend	React, Next.js (App Router, Server Actions), TanStack Query, TanStack Table, Tailwind CSS, shadcn/ui
Backend	Node.js, Express, NestJS, Laravel, Prisma, Mongoose, Socket.IO, JWT, Passport.js, Better Auth, Zod, REST APIs
Databases	PostgreSQL, MongoDB, Redis (Upstash, BullMQ), Supabase
DevOps & Tools	Docker, Git, GitHub Actions CI/CD, Jest, Supertest, pnpm workspaces, Vercel, Heroku, Cloudflare R2

EXPERIENCE

Syntactics Inc.

Full-Stack Developer Intern

Cagayan de Oro City, Philippines

Jun 2025 – Aug 2025

- Diagnosed duplicated initialization logic across 20+ modules in a CodeIgniter + React **EMR platform**, then consolidated it into a single shared hook that eliminated ~95% of the duplication across 25+ client deployments.
- Extracted a reusable **React + Tailwind CSS** component library from Figma specs for an employee training platform, standardizing the UI layer so subsequent pages could be assembled from existing patterns rather than built from scratch.
- Designed **Laravel REST API** endpoints for the same platform with multi-filter sortable data tables and **Cloudflare R2** file uploads, offloading binary assets from production storage to reduce long-term storage growth.

PROJECTS

DevLog — Developer Productivity Tracker

Jul 2026 – Aug 2026

NextJS · React · TypeScript · MongoDB · Mongoose · BullMQ · Redis · pnpm monorepo

[GitHub](#)

- Designed a modular **NestJS** backend with 9 resource modules, **JWT** + Google **OAuth** via **Passport**, a global guard with `@Public()` escape hatch, and ownership-scoped authorization at the service layer.
- Built **MongoDB** aggregation pipelines for streak tracking with per-user timezone handling, zero-filled 14-day activity series, and parallelized dashboard queries via `Promise.all()`.
- Implemented scheduled daily reports via **BullMQ** + **Redis** job queue with timezone-aware cron scheduling; enforced sliding-window **rate limiting** and Helmet headers across all endpoints.

Calibrate AI — AI-Powered Job Application Tracker

Mar 2026 – Jun 2026

Next.js · TypeScript · PostgreSQL · Prisma · Vercel AI SDK · Upstash Redis · Zod

[GitHub](#) | [Live](#)

- Built a schema-constrained **AI pipeline** (Vercel AI SDK + Mistral) enforcing deterministic JSON output via **Zod** strict schema, with a 4-tier scoring rubric and prompt-level guardrails against score inflation.
- Implemented resume versioning with side-by-side diff comparison and score-progression charts, plus an LLM-powered enhancer that tailors resumes to job descriptions via structured output.
- Enforced **Upstash Redis** sliding-window **rate limiting** (15 req/h/user); secured routes and Server Actions with **Better Auth** (email + Google **OAuth**) and row-level **Prisma** ownership checks. Used a direct **PostgreSQL** driver adapter to cut serverless cold starts.

Chirper — Real-Time Social Media Platform

Oct 2025 – Mar 2026

Next.js · Express 5 · TypeScript · PostgreSQL · Prisma · Socket.IO · Docker

[GitHub](#) | [Live](#)

- Architected a **pnpm monorepo** with a Controller–Service–Repository backend across **10 domains (40+ REST endpoints)**, a Next.js App Router frontend, and shared TypeScript packages.
- Engineered real-time messaging and live notifications with **Socket.IO**, per-socket **JWT** auth validated against the same `httpOnly` cookie used by REST, and connection-state recovery on reconnect.
- Unified three **Passport.js** strategies (email/password, Google **OAuth**, guest mode) behind a single JWT-cookie flow; modeled self-referential **Prisma** relations for threaded replies with **cursor-based pagination**. Containerized with **Docker** and deployed to Heroku.

Find It — Full-Stack Photo Tagging Game

May 2025 – Jun 2025

React · Express 5 · PostgreSQL · Prisma · Jest · Supertest

[GitHub](#) | [Live](#)

- Developed a Where's Waldo–style photo tagging game with a coordinate-normalization algorithm that maps browser click positions to intrinsic image dimensions for accurate cross-viewport validation.
