EDUCATION

University of Science and Technology of Southern Philippines

Bachelor of Science in Computer Science

Cagayan de Oro City

Expected June 2026

- Dean's List—Awarded for academic excellence across **4** consecutive semesters.
- Relevant Coursework: Data Structures and Algorithms, Algorithms and Complexity, Object-Oriented Programming, Database Systems, Software Engineering, Operating Systems, Machine Learning, Parallel and Distributed Computing

TECHNICAL SKILLS

Programming Languages	TypeScript, JavaScript, PHP, SQL, HTML5, CSS3
Frameworks & Libraries	React, Next.js, Astro, Node.js, Express.js, Laravel, Prisma, Socket.IO, TanStack Query, Tailwind CSS
Databases	PostgreSQL, Upstash Redis, Sanity CMS
Tools & Platforms	Git, Docker, Vercel, DigitalOcean, Supabase, Cloudflare R2

EXPERIENCE

Syntactics Inc.

Full-Stack Developer Intern

Cagayan de Oro City, Philippines

June 2025 – Aug 2025

- Architected a layout-level refactor for a multi-specialty EMR system (**Laravel + Next.js**), consolidating scattered initialization logic from **20+** pages into a single shared hook—eliminating **~95%** of duplicated boilerplate across 25+ active branch deployments.
- Engineered REST API endpoints, multi-filter sortable data tables, and **Cloudflare R2** file-upload integration for an employee training platform (**Laravel + Next.js**), shipping all features to production through senior-reviewed PRs.

PROJECTS

Calibrate AI — AI-Powered Job Application Tracker

[GitHub](#) | [Live](#)

Next.js · TypeScript · PostgreSQL · Prisma · Better Auth · Ministral 8B · Upstash Redis

- Engineered an AI-powered analysis pipeline (**Vercel AI SDK + Ministral 8B**) with **Zod**-enforced structured JSON output and a 4-tier anti-inflation scoring rubric, delivering **0–100** fit scores, skill-gap breakdowns, and actionable recommendations per application.
- Implemented per-user rate limiting via **Upstash Redis** sliding window (**8 req/hr**) and row-level **Prisma** ownership guards scoped to `session.userId` on every query—preventing API cost overruns and eliminating cross-user data exposure.
- Separated mutations (**Server Actions**) from reads (**React Query**-backed API routes) to enable cache invalidation, background refetching, and **optimistic UI** updates across all application views.

Chirper — Full-Stack Social Media Platform

[GitHub](#) | [Live](#)

Next.js · Express.js · TypeScript · PostgreSQL · Prisma · Passport.js · Socket.IO · Docker

- Architected a full-stack **pnpm monorepo** with shared TypeScript types and a strict Controller → Service → Repository Express 5 backend spanning **10** domains and **40+** REST API endpoints, containerized with **Docker** and deployed on DigitalOcean.
- Built real-time direct messaging and live notifications via **Socket.IO** with JWT cookie authentication and **2-minute** connection state recovery, rendering instant feedback using React 19 `useOptimistic`.
- Modeled a **Prisma** social graph (**9** models) with self-referential posts, many-to-many chat rooms, and **cursor-based pagination**—eliminating $O(n)$ offset row-skips—powering infinite-scroll feeds and threaded replies.

INDEPENDENT STUDY

The Odin Project

Oct 2023 – March 2026

Full-Stack JavaScript — Open-Source Curriculum

- Completed **30+** full-stack projects spanning static sites to production-deployed applications across **1,000+** hours of self-directed study, building proficiency in JavaScript, Node.js, React, and PostgreSQL.
