EDUCATION

University of Science and Technology of Southern Philippines

B.S. Computer Science, Cum Laude

Best Thesis Award • Dean's List (4 semesters)

Cagayan de Oro City

Jun 2026

TECHNICAL SKILLS

Languages	TypeScript, JavaScript, PHP, Python, SQL, HTML5, CSS3
Frontend	React, Next.js (App Router, Server Actions), TanStack Query, TanStack Table, Tailwind CSS, shadcn/ui
Backend	Node.js, Express, NestJS, Laravel, Prisma, Mongoose, Socket.IO, JWT, Passport.js, Better Auth, Zod, REST APIs
Databases	PostgreSQL, MongoDB, Redis (Upstash, BullMQ), Supabase
DevOps & Tools	Docker, Git, GitHub Actions CI/CD, Jest, Supertest, pnpm workspaces, Vercel, Heroku, Cloudflare R2

EXPERIENCE

Syntactics Inc.

Full-Stack Developer Intern

Cagayan de Oro City, Philippines

Jun 2025 – Aug 2025

- Diagnosed duplicated initialization logic across 20+ modules in a CodeIgniter + React **EMR platform**, consolidating it into a single shared hook that eliminated ~95% of duplication across 25+ client deployments.
- Extracted a reusable **React + Tailwind CSS** component library from Figma specs for an employee training platform, standardizing UI patterns and accelerating page development.
- Designed **Laravel REST API** endpoints with multi-filter sortable data tables and **Cloudflare R2** asset uploads, offloading binary storage from production database servers.

PROJECTS

DevLog — Developer Productivity Tracker

Jul 2026 – Aug 2026

NestJS · React · TypeScript · MongoDB · Mongoose · BullMQ · Redis

[GitHub](#) | [Live](#)

- Designed a modular **NestJS** backend with 9 resource modules, **JWT** + Google **OAuth** via **Passport**, a global guard with `@Public()` escape hatch, and ownership-scoped authorization.
- Built **MongoDB** aggregation pipelines for timezone-aware streak tracking, zero-filled 14-day activity series, and parallelized dashboard queries via `Promise.all()`.
- Implemented scheduled daily reports via **BullMQ** + **Redis** with timezone-aware cron scheduling; enforced sliding-window **rate limiting** and Helmet security headers.

Calibrate AI — AI-Powered Job Application Tracker

Mar 2026 – Jun 2026

Next.js · TypeScript · PostgreSQL · Prisma · Vercel AI SDK · Upstash Redis · Zod

[GitHub](#) | [Live](#)

- Built a schema-constrained **AI evaluation pipeline** (Vercel AI SDK + Mistral) enforcing deterministic JSON output via **Zod** strict schema, with a 4-tier scoring rubric and anti-inflation guardrails.
- Implemented resume versioning with side-by-side diff comparison and progression charts, plus an LLM-powered enhancer that tailors resumes to job descriptions via structured output.
- Enforced **Upstash Redis** sliding-window **rate limiting** (15 req/h/user); secured routes and Server Actions with **Better Auth** and row-level **Prisma** ownership checks.

Chirper — Real-Time Social Media Platform

Oct 2025 – Mar 2026

Next.js · Express 5 · TypeScript · PostgreSQL · Prisma · Socket.IO · Docker

[GitHub](#) | [Live](#)

- Architected a **pnpm monorepo** with a Controller–Service–Repository backend across **10 domains (40+ REST endpoints)**, Next.js App Router frontend, and shared TypeScript packages.
- Engineered real-time messaging and live notifications with **Socket.IO**, per-socket **JWT** auth validated against httpOnly REST cookies, and connection-state recovery on reconnect.
- Unified three **Passport.js** strategies (email/password, Google **OAuth**, guest mode); modeled self-referential **Prisma** relations for threaded replies with **cursor-based pagination**. Containerized with **Docker** and deployed to Heroku.

Find It — Full-Stack Photo Tagging Game

May 2025 – Jun 2025

React · Express 5 · PostgreSQL · Prisma · Jest · Supertest

[GitHub](#) | [Live](#)

- Developed a photo tagging game with a coordinate-normalization algorithm mapping browser click positions to intrinsic image dimensions for accurate validation; wrote **Jest** + **Supertest** integration tests and set up **GitHub Actions** health-pings.
